

ABSTRACT

A printing system including a plurality of different kinds of printers and a printer selecting device therefore are disclosed. The printer selecting device includes an accepting section for accepting
5 information representative of a desired number of printings input, and selecting means for selecting one of the printers matching with the desired number of printings. Image data to be printed are sent from the printer selecting device to the printer selected. In this configuration, one printer adequate for the desired number of
10 printings, which is an important factor for the selection of a printer, is automatically selected.
